Summary

Computer Science student with foundational knowledge of web development, Data Science, and machine learning. Proficient in Python (pandas, NumPy, scikit-learn) and Object-Oriented Programming, with experience building web applications using HTML, CSS, and JavaScript, and a solid understanding of Data Structures and Algorithms..

Education

B.Tech in Computer Science

2024 – 2028

Kalinga Institute of Industrial Technology, Bhubaneswar

CGPA: 7.54 / 10

Projects

CodePlus | React, Node.js, Express, PostgreSQL, Prisma, JWT, Docker | [GitHub](#)

May - June 2026

- Built a self-hosted Git server and repository visualization platform as a lightweight alternative to GitHub/GitLab.
- Implemented a custom Git HTTP server using Node.js child processes routing requests to native `git http-backend`, supporting clone, push, and pull operations.
- Integrated secure authentication using `bcryptjs` for password hashing and JWT for session management with Express middleware authorization guards.
- Configured PostgreSQL via Supabase with Prisma ORM for database queries and Redis via Docker Compose for caching support.

Renora | Node.js, Express.js | [GitHub](#)

March 2026

- Developed a dynamic backend system to manage products, enabling seamless upload, update, and edit operations.
- Implemented RESTful APIs using Express.js for smooth communication between frontend and backend.
- Built an admin panel interface for efficient product management with real-time data handling.
- Integrated image upload and update handling, ensuring proper storage and replacement of product images.

CreditWise | Python, scikit-learn, pandas, NumPy, Matplotlib, Seaborn | [GitHub](#)

June 2026

- Built an ML-powered loan approval prediction system classifying applicants as approved or rejected based on financial and personal attributes.
- Performed data preprocessing including missing value imputation, Label Encoding, and One-Hot Encoding
- Conducted EDA with correlation heatmaps, box plots, and distribution charts to identify key features like Credit Score.
- Trained and evaluated Logistic Regression, KNN, and Naive Bayes models using Precision, Recall, F1 Score, and Accuracy metrics and have done some feature engineering.

Skills

Languages: Java, SQL, Python

Web Technologies: HTML, CSS, JavaScript, Node.js, Express, React

Tools: VS Code, JupyterLab, Git, GitHub, Kaggle, Google Colab, Docker, Redis, Kubernetes

Data Analytics: Data cleaning and visualization using matplotlib and seaborn; cleaned and transformed datasets (missing values, duplicates, normalization) using NumPy and pandas

Machine Learning: scikit-learn, TensorFlow, PyTorch; Supervised Learning (Regression, Classification, Decision Trees, SVM), Unsupervised Learning (K-Means, PCA, Clustering), NLP, and Computer Vision concepts

Positions of Responsibility

Web Developer & Project POC, eLabs Society (College)

- Serving as Project Point of Contact (POC), responsible for coordinating project deliverables and team communication.
- Developed and contributed to a web application as part of the eLabs team.
- Assisted in backend development using Node.js and Express.js.
- Collaborated with team members to integrate frontend and backend components.
